CONTINUATION SHEET

And Reardon is merely another encryption key based authorization method which is not port based and does not automatically deem a management port as authorized to receive management commands. Applicant may be willing to amend the claims further to better express this concept as shown, for example, below.

Claim 1 (currently amended): A method for remotely managing a computer coupled to a communication bus, the method comprising:

predetermining one port of the computer as a management port and deeming the management port as the only port automatically authorized for receiving one or more management commands and all other ports as not automatically authorized for receiving any management command;

receiving, via the communication bus, the management command;

determining whether the management command was received at the management port coupled to the communication bus or received at a second port; and

~~when-if~~ the management command was-is received at the management port, executing the management command without requiring further authentication or authorization and if the management command is received at the second port ignoring the management command.
